## HYGRASGARD® RFTF-wModbus

Room humidity and temperature sensor ( $\pm 2.0\%$ ), on-wall, for temperature, relative / absolute humidity, dew point, mixture ratio, enthalpy, calibratable, with Modbus connection or W-Modbus (Wireless)

S+S REGELETECHNIK

The calibratable room sensor HYGRASGARD® RFTF-Modbus with Modbus connection, in an elegant plastic housing (Baldur 2) with snap-on lid, base with 4-hole attachment, optionally with/without display, measures air humidity (0...100% RH) and temperature (0...+50°C), with wModbus (-35...+80°C). These measured values are used to internally calculate the following parameters that can be retrieved via Modbus: absolute humidity, mixture ratio, dew point temperature, enthalpy (ignoring atmospheric air pressure). International system of units SI (default) can be changed to imperial (via Modbus). With wModbus device version, the W-Modbus (Wireless) replaces the RTU cable; the BMS connection is radio-based using a W-Modbus gateway.

A long-term stable, **digital humidity and temperature sensor** guarantees exact measurement results. The sensor is factory-calibrated; an environmental precision adjustment by an expert is possible. **Modbus sensor** with galvanically separated RS485 Modbus interface, selectable bus termination resistance, DIP switches for setting the bus parameters and bus address in a currentless state, internal LEDs for telegram status display and two-line display (illuminated, in the 7-segment and dot-matrix range, individually programmable).

The display value depends on the set unit system.  
By default, the display alternates between the **actual temperature** and the **actual humidity** (relative humidity).  
The Modbus interface allows the display to be **individually** configured both in the 7-segment area and in the dot-matrix area.

The **Modbus configuration** can be used to program an alternative output variable instead of the standard display.  
In this case, the first line displays the value and index while the second line displays the corresponding unit.  
The index identifies the display type:

Index 1 = temperature  
Index 2 = setpoint potentiometer  
Index 3 = dew point  
Index 4 = relative humidity  
Index 5 = absolute humidity  
Index 6 = mixture ratio  
Index 7 = enthalpy
